RAKOR KÜRESEL VANA VE ÇEKVALFLERİN MONTAJINDA DİKKAT EDİLMESİ GEREKEN HUSUSLAR

İmalatını yaptığımız rakorlar iki paralel yüzeyin birbiri üzerine oturarak bir plastik somunla sıkıştırılması esasına göre çalışmaktadır. Aynı eksende döşenmiş iki başı kelepçe ile zemine tesbitli sabit hatların üzerine pompa, gösterge, muhtelif aparat ve cihazların kolayca takılması ve sökülmesini temin ederler. Bu sökme ve takma işlemi iki paralel yüzey arasında olacağından boruları geri çekmeye hatları kesmeye veya esnetmeye ihtiyaç göstermeden pratik ayrılma birleşme sağlarlar.

Bu rakorlar toprak altına döşenmiş boruların birleştirilmesi, aynı eksende olmayan boruların eksene getirilmesi, kıvrılmış uzunluğu yetmeyen hatların gerdirilerek devam ettirilmesi, iki ucu sarkan boruların birleştirilerek ağırlığın rakora taşıtılması işlerinde kesinlikle kullanılamazlar. Çünkü borulardaki eğilme, bükülme ve yan kuvvetler iki paralel yüzeyi sıkıştıran somuna manivela tesiri yaparak dişlerin sıyrılmasına sebep olur. Bu sıyrılma su basıncından değil manivela kuvvetinden doğar. Böyle yerlerde kullanılan rakorlar iş görse bile ileride sorun yaratırlar.

Küresel vanalar ve çekvalflerde aynı teknik esaslar dahilinde kullanılmalıdır.

UNIONS BALL VALVES AND CHECK VALVE ASSEMBLY NOTICES

Our unions operate according to the principle of nesting two parallel surfaces one upon another and compressing them with a plastic nut. They assure assembling and disassembling of pumps, indicators, various equipments and devices on fixed lines which are installed in the same axis and both sides fixed to the ground with clamps. As this assembling and disassembling processes take place between two parallel surfaces, they assure an easy split and joining without requiring to cut or flex the lines and to pull back the pipes.

These unions are absolutely not used for joining pipes lines under soil, bringing pipes to the same axis, stretching the lines that the bended lengths aren't enough, joining carrying the weight of the pipe lines which both sides dangling. Using unions in these cases influence a leverage effect on nut, and cause threads to be grazed. This grazing is not coming from water pressure but from crank strength. Although unions work in mentioned circumstances, they will cause problems in the future.

Ball valves and check valves should be used according to the same technical bases.
